Understanding the power of the work of teaching and its role the struggle for justice

How is teaching powerful?

Why does it matter when we don't pay attention to the actual work of teaching?

How can we as teachers leverage the power of teaching?

We fail to connect the dots.

And that means that our actions are complicit in continuing pervasive patterns of injustice and inequity.

Notice that the arrows run both ways.

The environments in which we are all steeped shape what we take for granted and do, but learning these as normal further reinforces their persistence in society.

- 1. **Teaching is powerful**. When it is done with care and judgment, students can thrive—learn content, develop positive identities, learn to value others and work collectively.
- 2. Teaching also involves **enormous discretion**.
- 3. How that discretion is exercised can either reinforce racialized and oppressive patterns of social, personal, and epistemic injustice and harm, or it can **disrupt these patterns.**

The unique potential of mathematics to perpetuate injustice—or disrupt it

- The history of "mathematics" and who has constructed what we call math (i.e., white, male, western)
- The melding of "intelligence" and mathematics (and the history of "intelligence")
- Narrow constructions of "mathematics" that uphold these

- The rich resources of mathematics in many communities and cultures
- The power afforded by seeing oneself as "smart" or "good at math"
- The imaginative creative space possible in mathematics, for invention, experimentation, construction, representation, and performance
- The assets of collective work in mathematics

Fractions as numbers: The instructional goal for student understanding

3.NF.2.a

Represent a fraction 1/b on a number line diagram by defining the interval from 0 to 1 as the whole and partitioning it into b equal parts. Recognize that each part has size 1/b and that the endpoint of the part based at 0 locates the number 1/b on the number line.

Using discretionary spaces with care

- Interpreting Toni as asking a real question that she means.
- Hearing Toni's question as central to advancing the mathematical content.
- Reinforcing her mathematical identity, not choosing to read her body as disruptive.

- Interpreting Aniyah as competent to answer questions about her ideas.
- Hearing Aniyah's explanation as • central to advancing the mathematical content.
- Reinforcing her mathematical • identity, not choosing to read her body as struggling.

- Other children hear Aniyah as getting the discussion going, and Toni as asking an important mathematical question.
- Aniyah and Toni are both positioned as contributing to the discussion.
- Children see a teacher attending to Black airls as mathematical thinkers and contributors to collective work.

Discretionary spaces describe the many spaces and moments in which teachers make subjective judgments that either:

... act from habit and from patterns of white supremacy institutionalized in experience and professional training

or act to dismantle anti-Black racism and white supremacy.

Understanding content knowledge for teaching also matters for doing this meaningfully!
